

The TD Twin cap is the most versatile twin body on the market. It allows you to use any combination of Airmix and XR nozzles. You can use nozzles that produce the same spray quality or have a FINE/COARSE combination to get the best out of both droplet sizes.

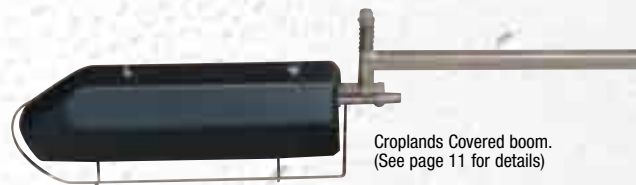

TD-TWIN with AirMix® Nozzles (see page 38 for more details)

Nozzles – Under Tree or Vine Spraying

For maximum spray drift reduction in under-tree or vine situations, consider the AirMix® or TurboDrop® range of air induction nozzles. The AirMix® nozzles can also be used in combination with the TDTWIN in certain situations where grasses or difficult to spray weeds are a problem.

With a perfect range of sizes to accommodate low to high application rates, the flat fan and off-centre AirMix® nozzles are an ideal choice for herbicide application in this sensitive environment.

For more information, contact Croplands. More individual nozzle information is available on pages 34, 35, 36 & 37.
